

Testing with Thunder Client

Thunder Client: <https://marketplace.visualstudio.com/items?itemName=rangav.vscode-thunder-client>

- Import Collection
- Import Environment

Adjust the values set in the environment accordingly. Select the imported “ITRK-Plugin-SDK” environment under Environment in the collection settings.

The tests can then be started.

The tests in the ‘For Singleshop Only’ and ‘For Multishop Only’ folders are only relevant for single and multi-shops respectively. They will fail in the other case.
